INDEX TO VOLUME 37

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. Algebra and Number Theory

05. Combinatorics

Howard, F. T. *Formulas for the number of binomial coefficients divisible by a fixed power of a prime*, 358.

*O'Neil, P. V. *A short proof of Mac Lane's planarity theorem*, 619.

Parker, E. T. *Edge coloring numbers of some regular graphs*, 423.

06. Order, Lattices, Ordered Algebraic Structures

Hung, H. H. *The amalgamation property for G-metric spaces*, 53.

Lakser, Harry. *Principal congruences of pseudocomplemented distributive lattices*, 32.

Reynolds, William H. *A note on embedding a partially ordered ring in a division algebra*, 37.

Rival, Ivan. *Maximal sublattices of finite distributive lattices*, 417.

08. General Mathematical Systems

Hung, H. H. *The amalgamation property for G-metric spaces*, 53.

10. Number Theory

Berndt, Bruce C. *A new proof of the functional equation of Dirichlet L-functions*, 355.

Brown, Ezra. *Biquadratic reciprocity laws*, 374.

Evans, Ronald J. *Modular forms on Hecke's modular groups*, 411.

Suryanarayana, D. and Rao, R. Sita Rama Chandra. *Distribution of semi-k-free integers*, 340.

12. Algebraic Number Theory, Field Theory and Polynomials

Rosenlicht, Maxwell. *An analogue of L'Hospital's rule*, 369.

13. Commutative Rings and Algebras

Alamelu, S. *On commutativity of endomorphism rings of ideals*, 29.

Arnold, J. T. and Brewer, J. W. *When* $(D[[X]])_{F[[X]]}$ *is a valuation ring*, 326.

Cowsik, R. C. *On a question of M. Hochster*, 75.

Gersten, S. M. K_3 *of a ring is* H_3 *of the Steinberg group*, 366.

Kuku, Aderemi O. *Some algebraic K-theoretic applications of the* LF *and* NF *functors*, 363.

Pomfret, J. *Similarity of matrices over finite rings*, 421.

Roberts, Leslie G. *An example of a Hilbert ring with maximal ideals of different height*, 425.

14. Algebraic Geometry

Eklof, Paul C. *Lefschetz's principle and local functors*, 333.

Ogus, Arthur. *Zariski's theorem on several linear systems*, 59.

15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)

Chung, I. Y. *Direct decomposition of tensor products into subtensor products*, 1.

de Oliveira, G. N. *Matrices with prescribed entries and eigenvalues. I*, 381.

Pomfret, J. *Similarity of matrices over finite rings*, 421.

16. Associative Rings and Algebras

Chacron, M. and Chacron, J. *Rings with involution all of whose symmetric elements are nilpotent or regular*, 397.

Gersten, S. M. *K_3 of a ring is H_3 of the Steinberg group*, 366.

Michler, Gerhard O. *The kernel of a block of a group algebra*, 47.

Wehlen, Joseph A. *Triangular matrix algebras over Hensel rings*, 69.

18. Category Theory, Homological Algebra

Barr, Michael. *Embedding of categories*, 42.

Gersten, S. M. *K_3 of a ring is H_3 of the Steinberg group*, 366.

Kuku, Aderemi O. *Some algebraic K-theoretic applications of the* LF *and* NF *functors*, 363.

20. Group Theory and Generalizations

Alperin, J. and Janusz, G. *Resolutions and periodicity*, 403.

Berger, T. R. *Hall-Higman type theorems*. IV, 317.

Boler, James and Evans, Benny. *The free product of residually finite groups amalgamated along retracts is residually finite*, 50.

Groves, J. R. J. *On direct products of regular p-groups*, 377.

Herzog, Marcel. *On Sylow intersections*, 352.

Karrass, A. and Solitar, D. *On finitely generated subgroups which are of finite index in generalized free products*, 22.

Lady, E. L. *Countable torsion products of abelian p-groups*, 10.

Lorimer, Peter. *A property of the groups $P\Gamma L(m, q)$, $q \geqq 5$*, 393.

Nico, William R. *A property of projective ideals in semigroup algebras*, 407.

Pomfret, J. *Similarity of matrices over finite rings*, 421.

Ribes, Luis. *Amalgamated products of profinite groups: Counterexamples*, 413.

Sehgal, Surinder K. *Generalized projectors and Carter subgroups of finite groups*, 347.

Tang, C. Y. *On the Frattini subgroups of certain generalized free products of groups*, 63.

Walker, Elbert A. *Ulm's theorem for totally projective groups*, 387.

Warne, R. J. *On the structure of idempotent semigroups*, 17.

B. ANALYSIS

26. Real Functions

Adams, David R. and Polking, John C. *The equivalence of two definitions of capacity*, 529.

Fadell, Albert. *On the existence of regular approximate differentials*, 541.

Helton, Jon C. *Some interdependencies of sum and product integrals*, 201.

Seeley, Robert T. *Addendum to "Extension of C^∞ functions defined in a half space"*, 622.

Wilkins, J. Ernest, Jr. *Bounds for the variational ratio of arbitrary linear systems*, 128.

28. Measure and Integration

Breckenridge, J. C. *The significant cylindrical condition and a Hausdorff rectifiable set*, 549.

Ridge, William C. *Spectrum of a composition operator*, 121.

Snell, Roy C. *The range of invariant means on locally compact groups and semigroups*, 441.

30. Functions of a Complex Variable

Behan, Donald F. *Commuting analytic functions without fixed points*, 114.

Gaier, Dieter. *A note on Hall's lemma*, 97.

*Globevnik, J. and Vidav, I. *A note on normal-operator-valued analytic functions*, 617.
Gresser, John T. *The compactness of the set of arc cluster sets of an arbitrary function*, 195.
Herrero, Domingo A. *Mean growth of inner functions*, 175.
Metzger, Thomas A. *On polynomial approximation in $A_\alpha(D)$*, 468.
Miller, Sanford S., Mocanu, Petru and Reade, Maxwell O. *All α-convex functions are univalent and starlike*, 553.
Näkki, Raimo and Palka, Bruce. *Uniform equicontinuity of quasiconformal mappings*, 427.
Ow, Wellington H. *PD-minimal solutions of $\Delta u = Pu$ on open Riemann surfaces*, 85.
Shaffer, Dorothy Browne. *On bounds for the derivative of analytic functions*, 517.
Sibner, R. J. *An elementary proof of a theorem concerning infinitely connected domains*, 459.
Styer, D. and Wright, D. *On the valence of the sum of two convex functions*, 511.

31. Potential Theory
Adams, David R. and Polking, John C. *The equivalence of two definitions of capacity*, 529.
Davis, Burgess. *An inequality for the distribution of the Brownian gradient function*, 189.
McCoy, Peter A. *Value distribution of potentials in three real variables*, 471.
Ow, Wellington H. *PD-minimal solutions of $\Delta u = Pu$ on open Riemann surfaces*, 85.

32. Several Complex Variables and Analytic Spaces
Chen, Su-shing. *On a class of quasiconformal functions in Banach spaces*, 545.
Gilman, Jane. *Compact Riemann surfaces with conformal involutions*, 105.

34. Ordinary Differential Equations
Bownds, J. M. and Diaz, J. B. *On restricted uniqueness for systems of ordinary differential equations*, 100.
Brown, R. C. and Krall, Allan M. *Adjoints of multipoint-integral boundary value problems*, 213.
Dickey, R. W. *A quasilinear evolution equation and the method of Galerkin*, 149.
George, J. H. and York, R. J. *Application of Liapunov theory to boundary value problems. II*, 207.

35. Partial Differential Equations
Ballou, Donald P. *Weak solutions with unbounded variation*, 181.
Diederich, J. R. *Weyl's lemma for pointwise solutions of elliptic equations*, 476.
Swanson, C. A. *A comparison theorem for eigenfunctions*, 537.
*Uhlenbeck, K. *A new proof of a regularity theorem for elliptic systems*, 315.

40. Sequences, Series, Summability
Atalla, Robert E. *Regular matrices and P-sets in $\beta N \setminus N$*, 157.

42. Fourier Analysis
Blei, Ron C. *On subsets with associated compacta in discrete abelian groups*, 453.

43. Abstract Harmonic Analysis
Miller, John J. H. and Simms, D. J. *On the coefficients of an asymptotic expansion of spherical functions on symmetric spaces*, 448.
Mueller-Roemer, Peter R. *A tauberian group algebra*, 163.

44. Integral Transforms, Operational Calculus
McCoy, Peter A. *Value distribution of potentials in three real variables*, 471.

45. Integral Equations
Sours, Richard E. *Absolutely continuous component of a class of integral operators*, 521.

46. Functional Analysis
Behncke, H. *Nilpotent elements in Banach algebras*, 137.
Busby, Robert C. *On the equivalence of twisted group algebras and Banach *-algebraic bundles*, 142.
Clancey, Kevin. *Invariant subspaces of infinite codimension for some nonnormal operators*, 525.
Cochran, Allan C. *Inductive limits of A-convex algebras*, 489.
Davis, William J. and Johnson, William B. *A renorming of nonreflexive Banach spaces*, 486.
Eifler, Larry Q. *Inverting sets for function algebras*, 96.
Howard, Joe. *Mackey compactness in Banach spaces*, 108.
Johnson, Gordon G. *Inner products characterized by difference equations*, 535.
Loy, R. J. *Continuity of higher derivations*, 505.
McCharen, Edith A. *A new topology on B*-algebras arising from the Arens products*, 77.
———. *A characterization of dual B*-algebras*, 84.
Mueller-Roemer, Peter R. *A tauberian group algebra*, 163.
Randtke, Daniel J. *A simple example of a universal Schwartz space*, 185.
Shields, Paul C. *Weakly compact positive operators on summable functions*, 456.
Sidney, S. J. *A note on enveloped measures*, 167.
Terzioğlu, T. *Smooth sequence spaces and associated nuclearity*, 497.
Wong, Pak-Ken. *On the Arens product and commutative Banach algebras*, 111.
Woods, Paul Carlton. *Markuschevich bases and semireflexivity*, 217.

47. Operator Theory
Clancey, Kevin. *Invariant subspaces of infinite codimension for some nonnormal operators*, 525.
Crandall, Michael G. *A generalized domain for semigroup generators*, 434.
Hochstadt, Harry. *One dimensional perturbations of compact operators*, 465.
Loy, R. J. *Continuity of higher derivations*, 505.
Okazawa, Noboru. *Perturbations of linear M-accretive operators*, 169.
Randtke, Daniel J. *Representation theorems for compact operators*, 481.
Ridge, William C. *Spectrum of a composition operator*, 121.
Shields, Paul C. *Weakly compact positive operators on summable functions*, 456.
Sours, Richard E. *Absolutely continuous component of a class of integral operators*, 521.

49. Calculus of Variations and Optimal Control
Silverman, Edward. *A necessary condition in the calculus of variations*, 462.

C. Applied Mathematics

68. Computer Science
Young, Paul. *Easy constructions in complexity theory: Gap and speed-up theorems*, 555.

D. Geometry

50. Geometry
Lorimer, Peter. *A property of the groups $P\Gamma L(m, q)$, $q \geqq 5$*, 393.

52. Convex Sets and Geometric Inequalities
Loveland, L. D. and Valentine, J. E. *Convex metric spaces with 0-dimensional midsets*, 568.

53. Differential Geometry

Chen, Bang-yen. *A characterization of standard flat tori*, 564.

Gordon, William B. *An analytical criterion for the completeness of riemannian manifolds*, 221.

E. Logic and Foundations

02. Logic and Foundations

Blass, Andreas. *Determinateness and continuity*, 572.

Eklof, Paul C. *Lefschetz's principle and local functors*, 333.

Young, Paul. *Easy constructions in complexity theory: Gap and speed-up theorems* 555.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes

Davis, Burgess. *An inequality for the distribution of the Brownian gradient function*, 189.

Hanson, D. L. and Wright, F. T. *A theorem about the oscillation of sums of independent random variables*, 226.

Lange, Kenneth. *Decompositions of substochastic transition functions*, 575.

Rogge, Lothar. *The convergence determining class of regular open sets*, 581.

G. Topology

22. Topological Groups, Lie Groups

Lee, D. H. *On the homomorphisms of locally compact groups*, 246.

Snell, Roy C. *The range of invariant means on locally compact groups and semigroups*, 441.

54. General Topology

Chimenti, Frank A. *Tychonoff's theorem for hyperspaces*, 281.

Choe, Tae Ho. *Injective compact distributive lattices*, 241.

Friedler, Louis. *Quotients of proximity spaces*, 589.

Fuller, R. V. *A characterization of local compactness*, 615.

Gazik, R. J. *A hyperspace for convergence spaces*, 234.

Hindman, Neil. *Preimages of points under the natural map from $\beta(N\times N)$ to $\beta N\times\beta N$*, 603.

Hung, H. H. *The amalgamation property for G-metric spaces*, 53.

Loveland, L. D. and Valentine, J. E. *Convex metric spaces with 0-dimensional midsets*, 568.

Michael, E. and Nagami, K. *Compact-covering images of metric spaces*, 260.

Slaughter, F. G., Jr. *The closed image of a metrizable space is M_1*, 309.

55. Algebraic Topology

Boler, James and Evans, Benny. *The free product of residually finite groups amalgamated along retracts is residually finite*, 50.

Chapman, T. A. *Locally-trivial bundles and microbundles with infinite-dimensional fibers*, 595.

Hardie, K. A. *On composite loop functors*, 586.

Heil, Wolfgang. *3-manifolds that are sums of solid tori and Seifert fiber spaces*, 609.

Wood, John C. *A theorem on injectivity of the cup product*, 301.

57. Manifolds and Cell Complexes

Brown, Robert F. *The real cohomology of compact disconnected Lie groups*, 255.

Dieffenbach, Robert M. *Homotopic PL n-balls are isotopic*, 271.

Heil, Wolfgang. *3-manifolds that are sums of solid tori and Seifert fiber spaces*, 609.
Narvarte, J. A. *A model for closed orientable 3-manifolds of genus 1*, 287.
Porter, Richard D. *An H-space with finite dimensional homology whose loop space has torsion*, 291.
Schochet, Claude. *On the bordism ring of complex projective space*, 267.
Wright, Perrin. *Formal 3-deformations of 2-polyhedra*, 305.

58. Global Analysis, Analysis on Manifolds

Franks, John. *Absolutely structurally stable diffeomorphisms*, 293.
Gordon, William B. *Analytical criterion for the completeness of riemannian manifolds*, 221.
Plante, J. F. *Homology of closed orbits of Anosov flows*, 297.
